

Manual rotor turnstile MRG

Description

Manual rotor turnstile MRG is a thoroughly mechanical pedestrian gate for controlled passage. The turnstile is made of hot-dip galvanized steel pipes, providing the turnstile with excellent protection against corrosion.

The gate is bi-directional, permitting passage in either direction only, in both directions, or in no direction.

Facts

Clear opening 600 mm
Height x width 2125 x 1410 mm
Surface treatment Hot-dip galvanized

Information

The turnstile is suitable for access control at sports facilities, amusement parks, companies and similar facilities. Simple and reliable construction.
